Extraordinary Animal Technology

# How It Works

Vetrax helps your veterinarian manage, monitor and evaluate treatment plans by providing an accurate and detailed picture of your dog's specific activities.

## ADVANCED MONITORING

Vetrax is the only system that goes beyond basic activity tracking to monitor behaviors like **shaking and scratching**, giving your veterinarian the ability to:

- Identify health challenges, like arthritis and dermatology issues, at an earlier stage.
- Evaluate weight management and nutritional programs.
- Review the activity of pets recovering from surgery.

## ACTIONABLE INSIGHTS

The Vetrax sensor, app and online portal work seamlessly to deliver data that helps you and your veterinarian:

- Plan, manage and evaluate your dog's treatment.
- Confirm observations, or uncover issues that may have gone unnoticed.
- Detect unusual behavior and notify you if an appointment is required.

## MAXIMIZED CARE

Vetrax is only available through the recommendation and oversight of your veterinarian. This ensures the most effective care is provided throughout the treatment plan, and helps:

- Improve communication between you and veterinary staff members.
- Increase the productivity and quality of each visit.
- Enhance the overall health of your pet.
