

Managing Patients with Oral Health Problems

CANINE Dental Disease

Plaque or tartar accumulation, or early periodontal disease (gingivitis) identified

- Ideally perform an initial professional cleaning
- Feed **Prescription Diet® t/d® Canine pet food** daily or, for smaller breeds (up to 20 lbs), feed **Prescription Diet® t/d® Canine Small Bites pet food** daily

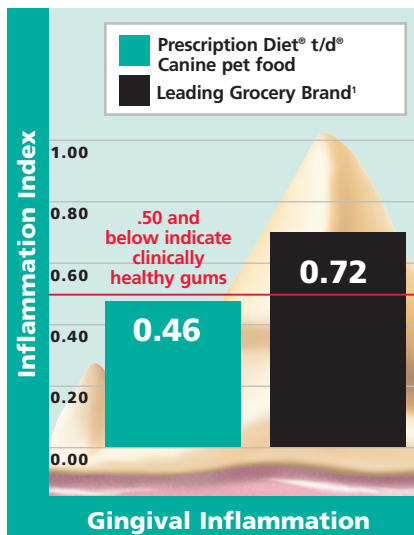

Dental disease not identified, but preventative management recommended

- Feed **Science Diet® Adult Oral Care dog food**

Reduces Plaque and Gingivitis*

* Results of a 6-month university clinical study.

¹ Logan EI, Finney O, Hefferen JJ. Effects of a dental food on plaque accumulation and gingival health in dogs. *J Vet Dent* 2002; 19(1): 15-18.

Prescription Diet® t/d® Canine pet food Effective oral care for everyday feeding

- Proven to reduce the buildup of plaque, tartar and stain
- Proven to reduce gingivitis
- Proven to reduce bad breath
- Effective adjunct to professional therapy for the management of periodontal disease
- Complete and balanced nutrition for adult and senior dogs

The Veterinary Oral Health Council:

- Sets the standard in veterinary dental care using guidelines developed by veterinary dentists, dental scientists and representatives from relevant organizations including the American Dental Association (ADA), AVMA and AAHA.
- Recognizes products that meet pre-set standards for plaque and calculus (tartar) retardation in dogs and cats. Products are awarded the VOHC Seal of Acceptance following review of data from trials conducted according to VOHC protocols.
- Regular use of products carrying the VOHC seal helps control periodontal disease in pets. Always look for the VOHC Seal of Acceptance on products for oral health.
- Hill's® Prescription Diet® t/d® and Science Diet® Oral Care are the only dog foods to earn the VOHC Seal of Acceptance for BOTH plaque and tartar control.
